

FOR FINANCE TEAMS

7 finance tasks I handed to AI first

The boring ones. The ones nobody misses.

I'm a CFO, not an engineer. I didn't rebuild my stack. I just stopped doing seven things by hand — the dull, repetitive stuff that quietly ate my Tuesdays. Here's the list, roughly in the order I'd start.

-
- 01** ☐ **Sorting transactions**
The mind-numbing one. Someone on my team used to lose half a Tuesday dropping transactions into the right buckets. AI does the first pass in minutes now — you only look at the weird ones.

 - 02** ☐ **Chasing late invoices**
Nobody enjoys writing the third “just circling back” email. AI drafts them, and more usefully tells you who's actually late versus who always pays on day 45 anyway.

 - 03** ☐ **Catching double payments**
We paid one supplier twice back in 2023. Found it two months later, by accident. Now something watches for it — same vendor, same amount, same week — and flags it before the money leaves.

 - 04** ☐ **The first draft of the monthly report**
Not the final version. The skeleton. Numbers pulled, the obvious moves written up, so you're editing a draft instead of staring at a blank page at 9pm.

 - 05** ☐ **Variance commentary**
Actual vs budget. AI writes the rough “what moved and probably why”, you fix the story where it's wrong. Kills the worst hour of close.

 - 06** ☐ **The 13-week cash flow**
The forecast everyone agrees matters and nobody updates, because it's tedious. AI refreshes it off the latest invoices and how people actually pay.

 - 07** ☐ **“Where did this number come from?”**
The question that derails every board meeting. Instead of digging through tabs live while six people watch, you get the trace back to the source in seconds.
-

None of it replaces you. It just gives you back the Tuesday. **Start with one — probably number 1.**
